*Mosaic colours shown here are purely indicative, tonal variation is an inherent characteristics of high temperature fired product.

*Size variations and irregular edges are inherent characteristics of recycled mosaics. These characteristics can affect the grout joint appearance and enhance the natural aura of the product.

*Neon look mosaics after exposure to natural/artificial lights for some time give photoluminescent effect which is visible in complete darkness. After a few minutes the glow of the mosaic begins to decay, the effect gets reduced by 90% within an hour, which remains visible for the next 6-7 hours.

Aligned Technique - An arrangement of "unsize" mosaic in a regular grid layout, wherein the mosaic placement is parallel and perpendicular to each other with the specified joint gap.
